Map

1. Syntax: let _map = new Map([Iterrables])

2. Iterables can be Array or any **Iterable** object whose elements are key-value pairs.

3. **Null** values are treated **as undefined**.

4. An Map object iterates its elements in insertion order.

5. A for…of loop returns an array of [**key**, **value**] for each iteration.

6. Key equality is based on **sameValueZero** algorithm. NaN equal NaN. +0 equal -0. All other values are considered equal according to the semantics of the **===** operator.

7. Object vs Map

Object	Map
Keys are string or symbol	Any value
Keys are ordered	Not ordered
Get size manual	By size property
Must manual implement iterables	Iterables default
